PROFESSIONAL SUMMARY

Multi-disciplinary **Founding Full-Stack Engineer & AI Systems Developer** specializing in taking complex software products from blank canvas to scaled production. Experienced across end-to-end full-stack architectures (**React 19, Next.js, FastAPI, Node.js**), low-latency high-throughput telemetry (**60 FPS OffscreenCanvas, 20kHz+ sensor data**), rigorous software quality & security validation (**Playwright E2E, ClusterFuzzLite, AddressSanitizer**), AI workflow DAG orchestration, biomedical computer vision, and technical growth marketing.

Hands-on track record architecting distributed microservices, embedded storage engines (C++17), transactional undo-logs with ACID crash recovery, LLM evaluation pipelines, and technical SEO/metadata funnels that double organic user acquisition.

End-to-End Product Engineering Lifecycle:

Architecture	Development	AI Integration	UI/UX Design
Testing & QA	Security & Memory	Cloud Deployment	Growth & SEO

"Strong dedication to founding-stage and high-ownership engineering environments where product vision, AI capabilities, low-latency UI/UX, software reliability, and user growth converge seamlessly."

TECHNICAL SKILLS & STACK

PROGRAMMING LANGUAGES

CORE

Python | TypeScript | JavaScript | SQL | C++17 | Rust | Swift 6.0 | HTML5 / CSS3

FULL-STACK DEVELOPMENT & UI/UX

FOUNDING

React 19 | Next.js | FastAPI | Node.js | Express.js | RESTful APIs | WebSockets | Tailwind CSS | OffscreenCanvas (60 FPS) | D3.js | Chart.js | Framer Motion | GSAP | Figma

AI / ML & COMPUTER VISION

SPECIALIZED

PyTorch | OpenCV | Computer Vision (U-Net) | CNNs | AI Workflow DAG Engines | LLM Prompt Evaluation | NLP & Classification | Genetic Algorithms | Ensemble ML | Bio-signal Telemetry

BACKEND, STORAGE & SYSTEMS

HIGH-THROUGHPUT

PostgreSQL | Supabase | MongoDB | Redis | SQLite | Prisma ORM | Transactional Undo-Logs | AST Query Compilers | B-Trees | Multi-Tenant RBAC

QUALITY ASSESSMENT (QA) & SECURITY

RIGOROUS

Playwright E2E | PyTest & Jest | ClusterFuzzLite Fuzzing | AddressSanitizer (ASan) | W^X Memory Policy | Anti-Cheat Heuristics | Performance Benchmarking | Automated Regression Testing

DIGITAL MARKETING, GROWTH & DEVOPS

GROWTH ENGINE

Technical SEO | Programmatic SEO | Conversion Rate Optimization (CRO) | Google Analytics & GSC | Funnel Telemetry | LinkedIn Content Strategy | Docker | CI/CD Pipelines | Vercel | Git / GitHub Actions

PROFESSIONAL & GROWTH EXPERIENCE

AFTERQUERY

Remote

May 2026 - Present

Software Engineer / Systems & API Contractor

- Architecting scalable data pipelines, resilient backend microservices (**FastAPI**), and high-throughput document-intelligence APIs.
- Authored automated **QA regression test suites**, abstract syntax tree (AST) parsing compliance verifiers, and load-testing harnesses for multi-tenant environments.
- Investigated and debugged complex asynchronous state machines, queue reconciliations, and caching layers with high reproducibility.
- Engineered low-latency client interfaces with React/Next.js, optimizing payload parsing and reducing document render times by 35%.

ROTORDYN

Contract

June 2026 - July 2026

Full Stack Developer & Telemetry Systems Engineer

- Built **RotorDyn**, an industrial vibration telemetry platform ingesting 20kHz+ streaming accelerometer sensor data with zero frame drops.
- Implemented **60 FPS OffscreenCanvas rendering** plotting over 100,000+ data points simultaneously with zero UI stutter, integrated with real-time Fast Fourier Transform (FFT) signal analytics.
- Engineered asynchronous WebSockets ingestion workers and modular Fourier analysis plotting widgets for industrial machinery diagnostics.
- Designed intuitive dark-mode telemetry UX and built automated stress-testing scripts verifying low-jitter rendering under heavy telemetry load.

TECHNICAL GROWTH & DIGITAL MARKETING

Founding Scope

2024 - Present

Growth Strategist & Technical Marketing Engineer

- Spearheaded **technical SEO**, programmatic metadata architecture, and OpenGraph structured data across web properties, improving organic search visibility and developer discoverability.
- Deployed data-driven **LinkedIn marketing campaigns** and content growth strategies, establishing developer brand positioning and driving organic traction.
- Implemented **conversion rate optimization (CRO)** funnels and web telemetry analytics (Google Analytics, UTM attribution tracking) to double user onboarding completion.
- Authored technical deep-dives, developer documentation, and engineering announcements driving inbound developer community engagement.

SELECTED FEATURED PROJECTS

JIGFLOW ORCHESTRATOR

Flagship

AI Engine

React 19 | TypeScript | FastAPI | WebSockets

Visual AI Workflow Orchestration & Execution Engine

- Engineered a visual node-based execution canvas and workflow builder for running complex, multi-step **AI reasoning chains and multi-agent systems**.
- Implemented **topological DAG validation algorithms** to prevent cyclic executions, combined with real-time streaming telemetry and execution monitoring over WebSockets.
- Architected asynchronous state queues with sub-second feedback, reliable session resumption, and node-level error boundaries.
- Designed human-centric node-connecting UX with smooth zoom/pan physics, interactive state inspectors, and customizable prompt payloads.

APTIHIRE

Flagship

AI & QA Platform

Next.js | FastAPI | Python | PostgreSQL | Playwright

AI-Driven Adaptive Technical Aptitude Assessment & Proctoring Platform

- Developed an adaptive recruitment testing portal featuring automated candidate evaluation, **anti-cheat detection heuristics**, and skill gap analytics.
- Implemented deterministic evaluation with an evidence-grounded scoring pipeline: `Candidate → Attempt → Test Case Execution → LLM Evaluation → Skill Gap Breakdown`.
- Built automated proctoring verification (tab-switch detection, browser activity telemetry, timing analysis) while preserving deterministic scoring authority.
- Engineered automated end-to-end release validation using **Playwright E2E** to verify zero console exceptions or network failures during live test sessions.

SIH CIVIC REDRESSAL & AUTOMATION

Smart India Hackathon

React FastAPI NLP GIS Mapping

Intelligent Civic Grievance Triaging & Department Routing System

- Built an intelligent administrative grievance triaging system featuring **NLP automated complaint categorization and priority urgency scoring**.
- Designed administrative UX dashboards with geospatial heatmaps, automated department escalations, and resolution timers, reducing routing overhead by 60%.

BINARY CONTAINER RUNTIME & VIBRANTDB

Systems & QA

C++17 ClusterFuzzLite AddressSanitizer ACID Logs

Low-Level Systems Engineering, Executable Security & Transactional Storage

- Engineered ELF64/PE32+ executable verifier with active **W^X memory policy enforcement**, rigorously fuzzed using **ClusterFuzzLite** and validated with **AddressSanitizer (ASan)**.
- Developed zero-dependency C++17 document database with AST query compiler and transactional page-level undo-logs guaranteeing ACID crash recovery.

RESEARCH PUBLICATION // SLEEP DISORDER CLASSIFICATION

2026

Optimized Ensemble Machine Learning & Genetic Algorithms • Co-authored

Researched physiological and sleep bio-signal telemetry classification utilizing genetic-algorithm hyperparameter optimization combined with ensemble machine learning classifiers to maximize predictive accuracy and feature stability.

EDUCATION

Narasaraopeta Engineering College (Autonomous)

Affiliated to JNTUK • B.Tech in Computer Science & Engineering (Artificial Intelligence) • 2022 – 2026

CGPA: 7.51 / 10.0

FOUNDING ROLE ALIGNMENT

Founding Full-Stack Eng
React 19, Next.js, FastAPI, Node.js, PostgreSQL

Founding AI Systems Eng
DAG Engines, LLM Evaluation, PyTorch, OpenCV

Founding Quality Eng (QA)
Playwright E2E, ClusterFuzzLite, ASan, Regression

Founding UI/UX & Growth
60 FPS OffscreenCanvas, Technical SEO, CRO
